****Open to enlisted and officers who meet the degree requirements***

*****College transcripts only required for enlisted applicants to verify degree***

Area(s) of Consideration: (1) Members of the MS National Guard (Statewide) *(Applications from members not currently assigned to a unit or duty station in MS will not be considered for this announcement)*

Special Note: This FULL TIME MILITARY duty position vacancy in the Air National Guard is announced and will be filled under the provisions of Section 502(f), Title 32 and United States Code.

Specialty Summary: The Logistics Readiness specialty (AFSC 21RX) encompasses the integration of four logistics competencies at the basic, senior, and master levels for Logistics Planning, Supply Management, Distribution Management, and Leadership. Responsibilities include directing integrated logistics processes; accomplishing joint logistics planning for war fighting support and sustainment with the Joint Staff, Unified Commands, other military services, and agencies of the Office of the Secretary of Defense; and directing acquisition and wholesale logistics activities. Related DoD Occupational Group: 280100.

Duties and Responsibilities: Force Development. The core of Logistics Readiness Officer (LRO) human capital development is officership and leadership with logistics competencies aligned and expanded upon throughout a career. Deliberate education, training, and experience opportunities will shape LROs for the future high-end fight and align with the vision of the LRO of 2035: the LRO of the future excels in developing and leading AF, Joint, Coalition teams for logistics community and beyond. They are in demand to serve as Group/CCs, Wing/CCs, and could grow into future MAJCOM A4s, Combatant Command J4s, and other Joint senior leaders. Logistic Competencies: The new competency-based model in accordance with earned proficiency levels (basic/intermediate/advanced/expert) will enable LROs to think critically and drive effective decision-making for all domains among the conflict and competition. Logistics Planning: Directs peacetime, contingency, and wartime logistics planning operations including deployment command and control, Logistics Readiness Centers, Combat Support Center activities, deployment, bed-down, redeployment activities, War Reserve Material (WRM) management, support agreement management, Time-phased Force Deployment Data (TPFDD) and Unit Type Codes (UTCs). Within Logistics planning, the sub-competency Plan and Support Program exists. This is the management and evaluation of logistics support capabilities. Supply Management: Identifies and coordinates

requirements and planning for joint supply activities throughout the DoD and manages key global suppliers to support Combatant Commander requirements. Critical elements of supply chain management include understanding and prioritizing requirements; visibility as maneuver, identifying mission-essential weapon systems and equipment; visibility of material moving through the distribution pipeline; ability to accurately forecast demands for sustainment; and privatization of supply tasks in the area of responsibility (AOR). This competency is further broken down into three sub-competencies: Life Cycle Logistics, Consumable Commodities, and Repairable Commodities. Life Cycle Logistics develops, initiates, integrates, and manages all logistics actions associated with life cycle management of weapon systems, subsystems, and equipment. Consumable Commodities is the management of commodities which are consumed, including hazardous material, Petroleum, Oil and Lubricants (POL). Finally, Repairable Commodities is the management of commodities which are repaired, including aircraft parts, equipment, and vehicles. Distribution Management: Responsible for logistics pipeline management and time-sensitive delivery of material in support of peacetime, contingency, and wartime operations. Maintains in-transit visibility for shipments of personal property, passengers, supplies and equipment. This competency is further broken down into three sub-competencies: Transportation Management, Surface Transportation, and Air Transportation. Transportation Management directs transportation operations to include managing cargo distribution functions including receiving, inspecting, tracing, packaging, and shipping of supplies, Nuclear Weapons-Related Material, equipment, war readiness spares, and household goods (HHG). Surface Transportation is the management of cargo and passenger distribution functions through the surface transportation system. Finally, Air Transportation includes the management of cargo and passenger distribution functions through the air transportation system. Leadership: Lead through problem-solving, critical thinking, appropriate decision-making, and integration of teams. This fourth core competency is further broken down into five sub-competencies: Unit Readiness, Inspections, Budget, Training, and Organizational Management. Unit Readiness involves evaluating and preparing unit personnel and equipment for multi-domain mission requirements. Inspections include driving a proactive and effective unit inspection program. The budget includes apportionment programs for all personnel. Finally, Organizational Management is organizing, planning, and leading the unit.

Performs other duties as assigned.
